Thank you Dave (and Geoffrey)! I think it's unlikely that the meetings will get into this level of specifics but it is good to know in case. I will share this information with Sue.

Hi Jennifer,

I checked in with Geoffrey and we agree that these are all of the current air-related issues for the oil and gas sector in Alaska.

Geoffrey is the lead on the first two topics, I'm the lead for the PSD permit issues, and HQ is the lead on the fourth (with several of us here supporting them). Geoffrey has dealt with some OOOOa requests but we're not sure what you mean by your fifth topic.

All of the first four topics have work underway, which work was somewhat delayed by the shutdown. Let us know if you want a short update on any of them.

And of course, you're fully aware of all the NEPA work on the gas pipeline and other oil and gas projects on the North Slope.

Dave

**Subject:** On-going air issues for Oil and Gas Sector in Alaska

Hello Dave,

With Chris' plans to travel to Alaska for the Alaska Forum, and possible meetings with new state commissioners, I wanted to check to see if the list below is still the universe of priority air-related issues for industry in Alaska. To my knowledge these are still ongoing.

- 2014 Alyeska request for exemption or alternative method for the Valdez Marine Terminal under 40 CFR Part 63 Subpart Y
- 2017 SAExploration inquiry as to whether permit is required for sled-mounted incinerator
- Former ADEC Commissioner Hartig's request that EPA work with ADEC on old North Slope PSD permits
- ConocoPhillips ongoing efforts to address CISWI/small remote incinerators through work practice standards
- OOOOa/methane emissions uncertainty

I know you are meeting with ConocoPhillips this week so there may be some new information there. I have not seen any movement, however, on the remaining issues (not to say there hasn't been). Any feedback you have is greatly appreciated. Feel free to forward if there are others you think should weigh in.

Thank you!

---
